ABOUT ME

AI Engineer and **Full Stack Developer** experienced in building AI-powered applications using Python, FastAPI, LLMs, LangChain, LangGraph, and RAG. Strong background in Angular, TypeScript, JavaScript, NodeJS, and backend development, with a focus on building reliable and maintainable applications.

EDUCATION AND TRAINING

[2023 – 2026]

Bachelor in Informatics

Faculty of Natural Sciences, University of Tirana

City: Tirana | Country: Albania

WORK EXPERIENCE

Contractor

City: Tirana | Country: Albania

[10/2025 – Current]

AI Engineer

- Developed **AI chatbots** using Python, FastAPI, LLM APIs, and LangChain.
- Built **RAG pipelines** with ingestion, chunking, embeddings, retrieval, and generation.
- Worked with **vector databases** for semantic search and document retrieval.
- Built LLM applications using **LangChain**, prompts, chains, and structured outputs.
- Developed **LangGraph workflows** with state, routing, loops, and tool execution.
- Implemented **tool calling** for AI agents to interact with APIs and backend functions.
- Built **AI automation** workflows combining LLMs, APIs, and business logic.
- Built **voice AI agents** using STT and TTS.
- Implemented **AI guardrails** and evaluation workflows for reliable outputs.
- Applied **ML fundamentals** using NumPy, pandas, and scikit-learn.
- Explored **LLM fine-tuning** for task-specific model adaptation.

Satisor

City: Tirana | Country: Albania

[09/2024 – 10/2025]

Full Stack Developer

- Developed SPAs using **Angular v8-v22**, TypeScript, HTML, SCSS, and Tailwind CSS.
- Built **reusable components** and scalable UI features.
- Used **RxJS**, Signals, and NgRx for reactive programming and state management.
- Implemented routing, guards, forms, validation, and **lazy loading**.
- Optimized Angular apps using **OnPush**, zoneless architecture, and modern best practices.
- Maintained and refactored Angular applications in **production codebases**.
- Developed **REST APIs** using Node.js, Express, and NestJS.
- Implemented **RBAC**, cookie-based authentication, and protected routes.
- Built **feature flags** and dynamic custom fields for flexible application configuration.
- Developed **file uploads** with validation and AWS S3/object storage.
- Integrated third-party services and APIs, including **Stripe Payments**.

- Used **Redis** for caching and Elasticsearch/Kibana for search and analytics.
- Collaborated with Git on feature development, debugging, refactoring, and **maintenance**.

PROJECTS

Admin Dashboard

Built a modern **Admin Dashboard** with **Angular 19**, featuring a highly **dynamic** and **reusable** table component for managing users.

The table supports full **CRUD operations** with sorting, filtering and pagination.

Every component is **reusable** and **configurable** allowing the dashboard to adapt easily to different datasets and requirements.

Additional features include form validation and comprehensive unit testing with **Jasmine** and **Karma** to ensure full functionality, prevent errors and catch bugs early.

A lightweight **backend JSON Server** was also implemented to provide dynamic data for the dashboard.

Flight Management System

Built a **Flight Management Application** with **Angular 19**, **Node.js**, and **JSON Server**, implementing role-based authentication and authorization. Users can search and filter flights, while administrators can manage both flights and registered users through full CRUD functionality.

Pharmaceutical Store

Developed a responsive **Pharmaceutical Store** website using **HTML5**, **CSS3**, and **JavaScript** for a client's pharmacy business. Designed a clean and intuitive interface to showcase medicines and pharmaceutical products, providing customers with an easy-to-navigate browsing experience across desktop and mobile devices.

Users Management API

Developed a lightweight backend using **Node.js** and **JSON Server** to simulate RESTful APIs for the **Admin Dashboard** application. The backend provides dynamic user data and supports frontend integration for user management features, enabling realistic CRUD operations during development.

Flight Tracker

Developed a **Flight Tracker** application with **HTML5**, **CSS3**, and **JavaScript**, implementing full CRUD functionality for creating, viewing, updating, and deleting flight records through a responsive and intuitive user interface.
